PROJECTS

Lead Flow CRM   Github|View
2025

The Lead Management System is a product developed to streamline lead and telecaller management, featuring analytics, call monitoring, and performance tracking for efficient staff oversight

It includes three different panels: superadmin panel (manages institutions), admin panel (assigns leads and manages telecallers), and telecaller panel (handles calls and updates lead status).
Tech Stack: React.js,Node.js,Express,MongoDB,Twilio

LumaAccess-V1   Github|View
2025

LumaAccess is a remote desktop access system enabling users to control their devices securely via a web interface.

Developed an Electron-based agent with WebSocket support for system commands like shutdown, restart, and lock. Desktop access and live screen sharing are fully functional, with upgrades planned for future releases.
Tech Stack: React.js,Node.js,Express,MongoDb,Prisma,Websocket,Electron,Ollama,Llama2,Groq

SOKKAI-Ecommerce Platform   Github|View
2024

Developed a full-stack clothing e-commerce platform as a freelance project, featuring browsing, cart, secure payments, user authentication, admin panel, and order management
Tech Stack: Next.js,MongoDB,Razorpay

THOTS   Github|View
2024

Developed Thots, a freelance mobile application project that brings interactive polling to a social media-style platform, replacing reels with polls in a scrollable feed.

The app allows users to create, share, and participate in polls in real-time, making opinion sharing more engaging and community-driven
Tech Stack: React Native, Node.js, Express, MongoDB.
